

WHAT IS THE FUND'S OBJECTIVE?

Strategic Income aims to achieve a higher return than a traditional money market or pure income fund.

WHAT DOES THE FUND INVEST IN?

Strategic Income can invest in a wide variety of assets, such as cash, government and corporate bonds, inflation-linked bonds and listed property, both in South Africa and internationally, in a manner similar to that usually employed by retirement funds.

As great care is taken to protect the fund against loss, Strategic Income does not invest in ordinary shares and its combined exposure to locally listed property (typically max. 10%), local preference shares (typically max. 10%), local hybrid instruments (typically max. 5%) and international assets (typically max. 10% on an effective exposure basis*) would generally not exceed 25% of the fund.

The fund has a flexible mandate with no prescribed maturity or duration limits for its investments. The fund is mandated to use derivative instruments for efficient portfolio management purposes.

* Prudential (SARB) international exposure is typically limited to a maximum of 15%

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/
minimum income exposures

Strategic Income is tactically managed to secure an attractive return, while protecting capital.

Its investments are carefully researched by a large and experienced investment team and subjected to a strict risk management process. The fund is actively positioned to balance long-term strategic positions with shorter-term tactical opportunities to achieve the best possible income.

While the fund is managed in a conservative and defensive manner, there are no guarantees it will always outperform cash over short periods of time. Capital losses are possible, especially in the case of negative credit events affecting underlying holdings.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The recommended investment term is 12-months and longer. The fund's exposure to growth assets like listed property and preference shares will cause price fluctuations from day to day, making it unsuitable as an alternative to a money market fund over very short investment horizons (12-months and shorter). Note that the fund is also less likely to outperform money market funds in a rising interest rate environment.

Given its limited exposure to growth assets, the fund is not suited for investment terms of longer than five years.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who

- ▶ are looking for an intelligent alternative to cash or bank deposits over periods from 12 to 36 months;
- ▶ seek managed exposure to income generating investments;
- ▶ are believers in the benefits of active management within the fixed interest universe.

WHAT COSTS CAN I EXPECT TO PAY?

The annual management fee is 0.75%.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other fund costs.

We do not charge fees to access or withdraw from the fund.

Please note that the commentary is for the retail class of the Fund.

The Fund returned 1.06% in November, bringing its 12-month total return to 11.94%, ahead of cash (8.24%) and its benchmark (9.10%) over the same period. We continue to believe that the Fund's current positioning offers the best probability of achieving its cash +2% objective over the medium to longer term.

Local bonds had a strong performance in November. The FTSE/JSE All Bond Index (ALBI) returned 3.06%, with the long end of the curve (i.e., bonds with maturities of 12+ years) delivering the best performance, up 4.0%. The belly of the curve (bonds with maturities 7-12 years from now) closed 3.20% higher, while medium-term bonds (maturing in 3-7 years' time) returned 2.32%. Short-term bonds (maturing in 1-3 years' time) were up 1.03%, while cash returns were subdued at 0.63%. Inflation-linked bonds (ILBs) were up 1.11% for the month.

November was a bit of a mixed bag regarding economic data, with soft economic growth readings in the third quarter of 2024 (Q3-24) and global central banks taking a more cautious stance on future policy easing. Global inflation continued to moderate, inching closer to central banks' target ranges – albeit at an increasingly incremental pace.

The Federal Reserve Board (the Fed) voted unanimously to lower the Fed funds rate target range by 25 basis points (bps) to 4.50% - 4.75% at the Federal Open Market Committee (FOMC) meeting in November. The FOMC noted that the economy has continued to expand at a solid pace, and unemployment has ticked up marginally, although it remains within the Fed's tolerance range. Inflation has made some strides towards reaching the 2% target, but it remains above where the Fed would want it to be. Risks to inflationary pressure and the growth outlook were assessed to be balanced, although the statement highlighted that the Fed stands prepared to adjust the stance of monetary policy, should risks emerge that could inhibit the attainment of its goals.

US headline inflation ticked up to 2.6% year on year (y/y) in October from 2.4% y/y in September, while core inflation remained unchanged at 3.3% y/y. There were significant increases in motor vehicle insurance, health insurance, rentals, and services inflation. Energy prices, telecommunications, and used vehicle prices eased, but not enough to offset the price pressures elsewhere.

China's headline inflation slowed to 0.3% y/y in October from 0.4% y/y in September, owing to weak inflation pressures in transport, housing, and household utilities. Food, medical services, and apparel prices also moderated. Domestic demand remains subdued despite the stimulus measures introduced in September, which include interest rate cuts, the relaxation of lending criteria, and support for stocks and property markets. Deflation in the Producer Price Index persists, with inflation falling 2.9% y/y in October from 2.8% y/y in September.

The rand ended the month at R18.06/US\$1, weaker than its close in the previous month but in line with its Emerging Market peer group. Offshore credit assets and certain developed market bonds continue to flag as relatively attractive. The Fund has utilised a significant part of its offshore allowance to invest in these assets. When valuations are stretched, the Fund will hedge/unhedge portions of its exposure back into rands/dollars by selling/buying JSE-traded currency futures (US dollars, UK pounds, and euros). These instruments are used to adjust its exposure synthetically, allowing it to maintain its core holdings in offshore assets.

The South African (SA) economy posted a surprise contraction of 0.3% q/q in Q3-24 from a growth of 0.4% q/q in Q2-24. From the production side, weakness was concentrated in the agricultural sector, which experienced adverse weather conditions that resulted in poor field crop production. The transport and trade sectors also contracted while financial services expanded. From the demand side, exports and inventories detracted from growth, while household spending and a decline in imports added, although not sufficiently to offset the weakness. Overall, the economy's performance is disappointing and reflective of very constrained domestic demand. The market expects a largely cyclical uplift in growth in the fourth quarter of 2024, supported by lower inflation and policy rates and some spending associated with two-pot withdrawals. That said, this is unlikely to be sufficient to reach our 1.1% 2024 GDP forecast.

The South African Reserve Bank voted unanimously to cut the repo rate by 25bps from 8% to 7.75% at the November MPC meeting. The post-meeting statement highlighted that the SARB is moving with caution, given the uncertainty surrounding global monetary policy settings and volatile local currency movements. The MPC also noted that in the near-term, growth-related data has been mixed, with the expectation that structural reforms in energy and logistics will lift growth in the medium term. There were few revisions to the inflation outlook, and risks were assessed to be balanced.

Headline inflation eased to 2.8% y/y in October from 3.8 y/y in September, while core inflation slowed to 3.9% y/y from 4.1% y/y. The main driver of the slowdown was another large fall in retail fuel prices and strong base effects in food inflation. Price movements outside of food and fuel were modest, with non-alcoholic beverages, restaurants, and hotel prices moderately up. We expected inflation to remain at or below 4.5% until mid-2025.

At the end of October, shorter-dated fixed-rate negotiable certificates of deposit (NCDs) traded at 8.175% (three-year) and 8.635% (five-year), with both maturities being lower compared to

the end of the previous month. Our inflation expectations suggest that the current pricing of these instruments remains attractive due to their lower modified duration and, hence, high breakeven relative to cash. In addition, NCDs have the added benefit of being liquid, thus aligning the Fund's liquidity with the needs of its investors. The Fund continues to hold decent exposure to these instruments (fewer floating than fixed), but we will remain cautious and selective when increasing exposure.

The election of Donald Trump as the next US president has created headwinds for global monetary policy. Easing is now expected to be much less than previously anticipated due to the implication of global tariffs on inflation. Developed and emerging market bond yields are all significantly lower compared to the start of the year. However, the current market pricing of interest rate expectations seems ambitious, which suggests global bond yields are well priced at current valuations. SA bonds have enjoyed renewed investor optimism following the formation of the GNU and on the heels of the global bond rally. SA inflation expectations have reduced significantly but are now fairly priced in through repo rate expectations. The country's fiscal accounts remain at risk over the longer term, and current bond valuations discount a more optimistic outcome. ILBs still offer value relative to nominal bonds in the event that inflation materialises higher than forecast or if real yields follow nominal bond yields lower. Bond portfolios should be positioned at a neutral duration at current levels, with a healthy dose of ILBs for good measure.

The local listed property sector was up 1.69% over the month, bringing its 12-month return to 42.1%. Operational performance will remain in the spotlight as an indicator of the pace and depth of the sector's recovery. The current subdued growth outlook, combined with an increase in the cost base, due to higher administered prices and second-round effects on loadshedding, will weigh on the sector's earnings in the coming year. We believe that one must remain cautious given the high levels of uncertainty around the strength and durability of the local recovery.

We believe that allocating significant amounts of capital to the local credit market is unwise and would represent a substantial opportunity cost in the face of attractive valuations in other, more liquid asset classes. The current level of credit spreads on offer is historically compressed.

The use of structured products, such as credit-linked notes (CLNs), has become ubiquitous within the local market. This sector has grown exponentially over the last five years and has reached a market size of over R100 billion. However, only a third of this market reprices, creating an inaccurate representation of asset volatility and pricing. CLNs mask the underlying/see-through credit risk as the issuing entity (predominantly local banks) is seen as the primary credit risk. The increased usage of CLNs has not expanded the pool of borrowers, rather it has only served to concentrate it. This is due to the ability to limit the volatility of these instruments by not marking them to market¹ based on the underlying asset price movements. This is why CLN repacks of SA government bonds have become so popular over the last five years. The combination of attractive yields and no volatility is an opportunity that not many would pass up, unless, of course, transparency of pricing is important to the underlying investor. As a result, there can be significant unseen risks within fixed-income funds. Investors need to remain prudently focused on finding assets of which the valuations are correctly aligned to fundamentals and efficient market pricing.

We remain vigilant of the risks from the dislocations between stretched valuations and the local economy's underlying fundamentals. However, we believe that the Fund's current positioning correctly reflects appropriate levels of caution, while its yield of 9.4% (gross of fees) remains attractive relative to its duration risk. We continue to believe that this yield is an adequate proxy for expected portfolio performance over the next 12 months. As is evident, we remain cautious in our management of the Fund. We continue to invest only in assets and instruments that we believe have the correct risk and term premium to limit investor downside and enhance yield.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION STRATEGIC INCOME FUND

Unit trusts should be considered medium- to long-term investments. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. The fund is mandated to invest a portion of its portfolio (typically up to a maximum of 10%) into foreign securities and may as a result be exposed to macroeconomic, settlement, political, tax, reporting or illiquidity risk factors that may be different to similar investments in the South African markets. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. The asset allocation by instrument type are reflected on a look-through basis. The asset allocation by issuer type and top issuer exposures are not reflected on a look-through basis. The yield shown is an estimate in part based on market assumptions and forecasts. The yield is calculated by taking the interest and income receivable of all the instruments in the fund divided by the net asset value, expressed as a nominal annual rate. It is provided to give an approximate indication of the achievable yield for an investment made at the reporting date. Actual experience may differ, based on changes in market values, interest rates and changes in costs actually experienced during the investment period. The yield disclosed on the MDD is current and calculated as at the MDD reporting date.

Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) Ltd (FSP 548), an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class A NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio over the period referenced. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the underlying fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the previous financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last available quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com
