

WHAT IS THE FUND'S OBJECTIVE?

The fund aims to maximise long-term growth from investing in a select group of small to medium-sized JSE-listed companies.

It seeks to outperform the combined JSE Mid and Small Cap Indices.

WHAT DOES THE FUND INVEST IN?

The fund invests in companies that form part of the JSE Small or Mid Cap Indices, or in companies that have a market capitalisation smaller than the company with the lowest market capitalisation in the JSE Large Cap Index.*

The fund is mandated to use derivative instruments for efficient portfolio management purposes.

*The investment universe has been amended to align with the ASISA category specifications for Mid and Small Cap Funds

IMPORTANT PORTFOLIO CHARACTERISTICS AND RISKS

Risk Profile

Maximum growth/
minimum income exposures

The fund actively seeks out attractively valued companies that could offer strong long-term growth.

Shares are selected following rigorous research into the long-term potential of a company, and whether it is currently attractively valued relative to its sector.

Shares can be volatile investments, and smaller companies in particular may experience price swings. Smaller companies have fewer shares trading freely in the market, which can restrict trading and amplify price movements. Consequently, there is a heightened risk of capital loss over the short term.

However, given its focus on investing only in attractively valued shares that could offer long-term growth, the fund may preserve capital better than its benchmark over the long run.

The fund is concentrated and only invests in one sector of the market, making it riskier than a general equity fund.

HOW LONG SHOULD INVESTORS REMAIN INVESTED?

The fund is managed to deliver the best possible returns over the long term; an investment horizon of five years or more is therefore ideal.

WHO SHOULD CONSIDER INVESTING IN THE FUND?

Investors who are building wealth, and who

- ▶ wish to benefit from the potential growth in medium-size and small companies;
- ▶ want to diversify their investments to include specific exposure to companies outside of the JSE Large Cap Index;
- ▶ accept the inherent volatility in investing in less liquid shares;
- ▶ want to hold the Smaller Companies Fund as one of multiple funds in their investment portfolio.

WHAT COSTS CAN I EXPECT TO PAY?

An annual fee of 1.00% (excl. VAT) is payable.

Fund expenses that are incurred in the fund include trading, custody and audit charges. All performance information is disclosed after deducting all fees and other portfolio costs.

We do not charge fees to access or withdraw from the fund.

Please note that the commentary is for the retail class of the Fund.

The Fund has had a very strong year, returning 30.7%, well ahead of its benchmark, which returned 18.1%. The Fund has returned a compound annual growth rate (CAGR) of 16.6% for the past three years, making it the best fund in its category. The main driver of this strong 2024 performance was the renewed market appetite for SA Inc. exposure. Mid and small cap funds typically have outsized exposure to this part of the market, much more so than general equity funds, which can invest in the large dual-listed shares. Calendar year 2024's performance was amongst the strongest the Fund has delivered in the past 20 years and comfortably exceeds the since inception CAGR of 12.6%. We would therefore expect a far more muted year in 2025.

The two biggest additions to the Fund in the quarter were Cashbuild and Transaction Capital (TCP).

Cashbuild is one of the largest building materials retailers in South Africa. The business and its share has had a torrid time since peaking at around R500 in 2018. In early 2024, the share bottomed at around R130. The principal reason for this poor performance has been the alarming decline in the company's profitability, driven essentially by an absence of revenue growth. Organic revenue has compounded by less than 2% since 2018. This is a problem for a business operating in a 5%-6% cost inflation environment as it gives rise to negative operating leverage. Cashbuild's earnings per share declined by a compounded 13.9% per year from 2018 to 2024. It is hard to get one's mind around why Cashbuild's revenue growth has been so weak for so many years, but it probably boils down to the fact that the average South African just doesn't have much disposable income to spend on building or maintaining a home. On the hierarchy of needs, you will always prioritise food, clothing and transport costs (to get to your place of work) over anything else. But this will possibly give rise to a pent-up demand for building materials, which might result in better revenue growth in the years ahead should the domestic economy grow closer to 2%, rather than the 1% we have gotten accustomed to.

TCP is an interesting opportunity. There has been a spate of corporate activity surrounding the company in the past few years, including the unbundling of WeBuyCars and the sell-down of the SA Taxi business following its near failure. This activity has muddied the water such that we presume many market participants have given up on the company. What remains is a business called Nutun, which is both a debtors book buying and collection business, and a call centre operator to international clients. Once the dust settles, we estimate that TCP can generate roughly R0.5bn of free cash flow per year against a market capitalisation today of R1.8bn. As such, it is possibly very undervalued if a few things go right.

The two biggest sells in the quarter were CA Sales and OUTsurance.

The motivation for both these trades was similar. These shares (and the underlying businesses) have performed fantastically well in the past few years. CA Sales was trading at R6.50 two years ago, and the Fund lightened its position at R16.05. Similarly, OUTsurance was trading at R34 two years ago and we trimmed at R66.81. We still maintain positions in both these companies mainly because of the growth we expect them to deliver in the years ahead. OUTsurance is also one of the highest quality businesses in South Africa in our opinion, having successfully disrupted what was once a stable short-term insurance industry to become a household brand.

IMPORTANT INFORMATION THAT SHOULD BE CONSIDERED BEFORE INVESTING IN THE CORONATION SMALLER COMPANIES FUND

The Smaller Companies Fund should be considered a long-term investment. The value of units may go down as well as up, and therefore Coronation does not make any guarantees with respect to the protection of capital or returns. Past performance is not necessarily an indication of future performance. Asset allocation and top 10 holdings are reflected on a look-through basis. Coronation Management Company (RF) (Pty) Ltd is a Collective Investment Schemes Manager approved by the Financial Sector Conduct Authority in terms of the Collective Investment Schemes Control Act. Portfolio managed by Coronation Asset Management (Pty) Ltd (FSP 548), an authorised financial services provider. The Management Company reserves the right to close the fund to new investors if we deem it necessary to limit further inflows in order for it to be managed in accordance with its mandate. Unit trusts are allowed to engage in scrip lending and borrowing. Standard Chartered has been appointed as trustees for the fund (www.sc.com/za; 011-2176600). Coronation is a full member of the Association for Savings & Investment SA (ASISA).

HOW ARE UNITS PRICED AND AT WHICH PRICE WILL MY TRANSACTION BE EXECUTED?

Unit trusts are traded at ruling prices set on every trading day. Fund valuations take place at approximately 15h00 each business day, except at month end when the valuation is performed at approximately 17h00 (JSE market close) and forward pricing is used. Instructions must reach the Management Company before 14h00 (12h00 for the Money Market Fund) to ensure same day value. The payment of withdrawals may be delayed in extraordinary circumstances, when the manager with the consent of the fund trustees deem this to be in the interest of all fund investors. These circumstances may include periods when significant underlying markets suspend trading which will prevent accurate valuation of the instruments held in the fund. When the suspension of trading relates to only certain assets held by the fund, these assets may be side-pocketed. This process allows normal liquidity on the assets that can be valued, but will delay liquidity on the affected portion of the fund. If the fund is faced with excessive withdrawals, the affected withdrawals may be ring-fenced, which is the separation and delayed sale of the assets reflecting the interest of the liquidity seeking investors. It ensures that the sale of a large number of units will not force Coronation to sell the underlying investments in a manner that may have a negative impact on remaining investors of the fund.

HOW WAS THE PERFORMANCE INFORMATION INCLUDED IN THIS FACT SHEET CALCULATED?

Performance is calculated by Coronation as at the last day of the month for a lump sum investment using Class R NAV prices with income distributions reinvested. All underlying price and distribution data is sourced from Morningstar. Performance figures are quoted after the deduction of all costs (including manager fees and trading costs) incurred within the fund. Note that individual investor performance may differ as a result of the actual investment date, the date of reinvestment of distributions and dividend withholding tax, where applicable. Annualised performance figures represent the geometric average return earned by the fund over the given time period. Unannualised performance represents the total return earned by the fund over the given time period, expressed as a percentage.

BENCHMARK DETAILS

The benchmark is a free-float market cap weighted index of small and mid-cap indices excluding real estate.

WHAT IS THE TOTAL EXPENSE RATIO (TER) AND TRANSACTION COSTS (TC)?

TER is calculated as a percentage of the average net asset value of the portfolio incurred as charges, levies and fees in the management of the portfolio over the period referenced. The TER charged by any underlying fund held as part of a fund's portfolio is included in the fund expenses portion of the TER, but trading and implementation costs incurred in managing the underlying fund are excluded. A higher TER does not necessarily imply a poor return, nor does a low TER imply a good return. The current TER may not necessarily be an accurate indication of future TER's. The 1 year TER is for the 12 months to end of the previous financial year (updated annually). The 3 year TER is for a rolling 36-month period to the last available quarter end (December, March, June and September).

Transaction costs are a necessary cost in managing a fund and impacts the fund's return. They should not be considered in isolation as returns may be impacted by many other factors over time including market returns, the type of fund, the investment decisions of the investment manager and the TER.

The Total Investment Charge is the sum of the Total Expense Ratio (TER) and transaction costs.

ADVICE AND PLATFORM COSTS

Coronation does not provide financial advice. If you appoint an adviser, advice fees are contracted directly between you and the adviser. For more information please contact the relevant platform (Linked Investment Service Provider or Life Assurance Provider).

WHERE CAN I FIND ADDITIONAL INFORMATION?

Additional information such as daily fund prices, brochures, application forms and a schedule of fund fees and charges is available on our website, www.coronation.com.
